Special Bulletin – Automatic Extinguishing System Servicers

April 25, 2008

One of the key pieces of information that the Idaho Surveying & Rating Bureau, Inc. (Bureau) and the insurance companies we serve need in order to best meet the needs of the citizens of Idaho that own and operate facilities with Automatic Fire Extinguishing Systems (AFES) is whether or not the system is UL 300 compliant.

As you know the UL 300 AFES system must be installed to very exacting specifications that are different for each and every model even models by the same manufacture. Simply moving an appliance can make an otherwise compliant system no longer UL 300 compliant.

The Bureau must rely on the information that you provide in the semi-annual service reports to determine if an installed AFES will either receive or continue to receive the very substantial property insurance pricing credits available for the system. However, the Bureau does make common sense evaluations of whether a system is in fact UL 300 compliant.

The Bureau needs your help to better serve your customers, who are also customers of the Bureau. Currently we receive reports in about nineteen (19) different formats. Most of these formats do not have language that is helpful to the Bureau and to your customers in determining if the AFES system is currently in compliance with the manufacturer's UL 300 installation instructions.

Specifically what we are looking for is a response to:

- 1. Originally installed as a UL 300 compliant system? Yes or No
- 2. Is the system as currently configured a UL 300 compliant system? Yes or No Usually some explanation of why it is not is appropriate if No is check for the second question.

Attached is an example of an AFES Report that you can use, copy, reprint to help you make the transition to provide this very important piece of information.

AUTOMATIC FIRE SUPPRESION SYSTEM SERVICE REPORT

Servicing Company:			Date of Service:			Time of Service:	
			Number of suppression systems at this Location:			Were All systems Service?	
			This report covers:				
Phone: Fax: Service Technician:			Manufacturer	Moo	iel No	Wet Dr	Originally Installed as a UL 300 ry System? Yes No.
			Cylinder Size Master		Other Cylinders		Due Hydro Test:
